THE EVOLUTION OF LEARNING GAMES
Earlier, the learning games would center around the subject matter and the topics that needed to be covered. This would make the game information-heavy and would cause the learner to lose interest.
Today, learning games are centered around the learner. Game designers take into account the players’ behavioral habits and what would entice engagement.
We focus on what actions will cause a learner to understand a concept, apply it properly, and remember it.
During the lockdown, games became a sort of sensation and caught the attention of learning departments across the world.
We have seen people come together through cloud gaming and this shows immense potential in solving some of today’s biggest learning challenges.
When organizations gradually shift to entirely digitally-driven learning mechanisms in the immediate future, serious games will become a way to build collaboration within teams and ensure engaging learning experiences.
SPEAK TO US TO BEGIN CREATING YOUR NEW LEARNING GAMES, TODAY.
